Dear recipient,

I became interested in the opportunity to study in this program, because in my current job I constantly need new information on digital development and the widest possible understanding of various digital environments. The need of understanding health data collection, management, and analysis will be needed increasingly in the future. Especially data protection and the special features of legislation in relation to data analysis tools will be needed in the field of health sector.

I hope that in the future I could work in the field of business management and or digital health care environments developing new services to the clients. One of my dreams is to help the city administration to develop into the new age of digital era.

Working in collaboration with international colleagues is something I am also very interested in. In this master's program I would be able to connect and network with European health and digital professionals as well as develop language skills for future career possibilities. I am also interested in the Data Science possibilities of this degree. I would love to learn more about applying systemic service design process and methods in the digital and hybrid operating environment of health care and social welfare.

I learn quickly and network easily with different people. I am fluent in English and can also speak French. I especially like group work. I also think my current job in the City of Helsinki would be able to offer the possibility for other students to collaborate well in my current work.
