

Dear Members of the Admissions Committee,

With this letter, I would like to express my interest in the ManagiDiTH program at ISCTE, AUTH and LAUREA. My aim is to be equipped to contribute and successfully lead projects in the field of digitalization of the Health sector within EU context. I find this program particularly appealing because it offers an integrated perspective on the field, contemplating Societal, Health Sector and Digital skills.

My academic background started in life sciences (BSc in Biology) and later evolved to data analysis and research in the medical sector (MSc in Medical Statistics), which I believe to confer me a good substrate for the successful completion of this program. Furthermore, during my master's degree I had the chance of collaborating with medical staff and research projects which gave me a direct perspective of the challenges of the current health system, especially in the topic of digitalization.

Having worked with data in the medical sector and later professionally as a data engineer for a company which focuses on health information systems, I am aware of the challenges and advances in this field.

Overall, I believe this master degree will round up my educational background and potentially enrich my career in contributing for the digitalization of the health sector, making it more agile, available and beneficial in the EU space.

Yours faithfully,

Daniel Castro
