Dear Sir or Madam,

I am writing this motivation letter in relation to my Masters application at Laurea university of Applied Sciences. As a Bachelor graduate in field of Nursing coming from the respected Laurea university of Applied Sciences, my latest goal is now to become a fellow colleague researching the exciting area in multidisciplinary knowledge in planning and supporting digitalization of healthcare and social services while further gaining experience at Helsinki University Hospital. Some of the strengths that have a significant impact on my job performance include flexibility and being a goal-oriented individual. Flexibility has helped me to adapt quickly to new technology in the digital health landscape; thus, helping me integrate new aspects of technology in healthcare. On the other hand, being goal-oriented (as an individual) has helped me to plan and schedule my duties effectively such that I achieve them in time. However, one skill that would bring the most improvement in my job performance would be the effective incorporation of machine language and artificial intelligence in decision-making. The current digital revolution necessitates individuals in the health sector to integrate new technologies in service delivery; however, my

current level with the incorporation of AI is intermediate. If I can attain an advanced level, I will make faster, and better decisions based on calculated metrics; thus, escalating my job performance.

Data protection and ethical issues on AI are among the most significant things I have learned in this course. Data protection is very significant since it deals protection of patients' data while the ethical issue of AI is critical since it should be regulated. Such concepts are very significant in the current world and the future since they determine ethics in service delivery.

I want to study digital health degree because I believe incorporation of technology in healthcare helps in improving the administration of healthcare services. My motivation lies in how the world can access telehealth and telemedicine services. Such availability will assist patients in sharing real-time information with their doctors without going to the hospital directly, thus reducing costs associated with traveling.

Furthermore, I have planning managed to apply a great extent of theory to practice at my working position such as circulating nurse, where I perform safety checks with the patient and guides them, scrub nurse assisting the surgeon, also working in the recovery room. In combination with my analytical and multitasking skills, each of my given tasks and projects seems more and more interesting, which further lit my interest in planning, supporting the digitalization of healthcare to promote of new procedures and services supported by Information and Communication Technologies (ICT)

Getting the opportunity to pursue a digital health degree will be an honor since I have had such an interest for a long time. Therefore, I will dedicate most of my time to learning the concepts, applications, and trends in digital health. By doing so, I will be able to grasp abundant knowledge around study. During my studies, I can apply some concepts I have learned during the period I have been working. For instance, I will apply the knowledge I have gained on patients' health data analysis in my coursework.

Thank you for considering my application. I appreciate your time and would love to speak with you further about my goals, past academic performance, and sincere interest in your program look forward to hearing from you.

Yours Sincerely

Rhoda Haataja
