Motivation Letter

I've been working as social worker in services for adults for five years after graduating university. I've been working with clients and my work also requires decision making. Besides working with clients, I'm currently interested in development work and digital tools management in social work. Digital development and new technologies have become a part of daily life in social care and healthcare sector. We use different digital tools regularly during our work and the safety and reliability of these tools is an important part of work. We also have an important role of digital inclusion amongst the population of our countries. My current career goal is to study in the ManagiDiTH program to gain more views and information on managing digital tools in health and social sector and gain possibility to work in development work in social care and healthcare sector. I've been working as a support person for Apotti system in my social work team. Apotti is currently our digital data system and work tool in the social care and healthcare sector here in Helsinki. The ManagiDiTH program has a lot to offer for me considering my current career goal and my interest in the subject. I have been also interested in gaining international experience in social work, which the program offers. I hope you consider my application.

Best Regards,
