Dear ManagiDiTH Committee,

I've been involved in multiple aspects of healthcare, such as clinical trials, care giving, investigation and education, now looking for new and progressive experiences that I hope to find in digital and value based health.

As a nurse I've had direct contact with the struggles of our health system and the extreme financial and operational pressures it is under, in order to allow care givers to provide quality health care, and ultimately, improve life quality.

The ManagiDiTH curriculum presents itself with a unique approach to health management, by promoting interdisciplinary knowledge and work exchange, that I believe to be the most adequate for me, as an health care professional, to begin my career in this area.

Ultimately I hope to develop skills to successfully promote services reorganization, and observe and experience the real impact of digital transformation on the health care providers and patients reality.

I consider my professional experience and knowledge as an health care giver and the experience and skills I would develop during this programme to improve each others growth symbiotically.

I thank you for considering me, and hope to be a part of the future health culture you're cultivating.

Kind Regards,

Catarina Duarte Fernandes
