

To the selection committee,

My name is Pedro, and I am a nurse specialized in Mental Health and Psychiatry. Over the years, I have gained extensive experience working in a variety of healthcare settings including public psychiatric hospitals, private healthcare institutions and social care organizations. This journey has provided me with a comprehensive understanding of how healthcare systems operate and the unique challenges they face.

In my clinical practice, I have had the privilege of working with diverse patient populations, each presenting unique challenges and opportunities for growth. My specialization in Mental Health and Psychiatry has led me to participate in numerous projects focused on psychoeducation, early intervention and disease management. These experiences have taught me that empowering patients is essential and that well-connected, efficient systems are key to achieving better outcomes for both patients and healthcare professionals.

Beyond my clinical responsibilities, I have embraced the role of union representative—a position that has enriched my professional journey significantly. This role has sharpened my skills in negotiation, conflict resolution and advocacy. This experience has not only strengthened my leadership and communication skills but has also deepened my commitment to creating a supportive and efficient work environment.

A recurring challenge I encountered throughout my career is the lack of interoperability between various information systems. In every institution where I worked, systems operated with limited communication, resulting in redundant administrative tasks and a significant diversion of time from direct patient care. Witnessing this inefficiency firsthand inspired me to seek solutions that streamline processes, reduce bureaucracy, and ultimately enhance the quality of care provided.

My growing interest in the technological sector is driven by a firm belief that healthcare delivery can be revolutionized through well-designed, user-focused systems. I envision a future where integrated technologies not only alleviate administrative burdens but also provide real-time insights to support clinical decision-making. With my clinical background and firsthand insights into the daily challenges of healthcare delivery, I am well-positioned to contribute to the development and implementation of such systems.

This master's program represents a pivotal step in my career transition toward consulting in healthcare technology. I am eager to acquire the technical skills and advanced knowledge necessary to bridge the gap between clinical expertise and technological innovation. I aspire to leverage this interdisciplinary approach to drive positive change—improving system interoperability, enhancing the efficiency of healthcare processes, and ultimately elevating patient care.

Thank you for considering my application.

Sincerely,

Pedro
