

Dear Admissions Committee of ManagiDiTH,

I am writing to show my interest in joining the ManagiDiTH program. I am very passionate about using digital technologies to improve healthcare. I finished my bachelor's degree in Digital Technologies and Health, where I learned how to connect technology with healthcare to help patients and caregivers.

During my studies, I gained many important skills. For example, I learned about data analysis, programming fundamentals and database management, which help in designing and improving digital health tools. In classes like Health Information Systems and Algorithms and Data Structures, I worked on building efficient systems to manage healthcare data.

I also learned how to plan and manage projects in healthcare during courses like Project Planning and Management and Applied Projects in Digital Technologies and Health. These classes taught me how to work on practical problems and find useful solutions for healthcare challenges.

In addition, classes like Social Psychology of Health and Assistive Technologies and Telehealth helped me understand how technology can improve patients' lives. I also learned creative problem-solving and innovation skills in courses like Entrepreneurship and Innovation and Design Thinking, which I want to use in healthcare innovation.

My main goal is to work with healthcare providers and use digital tools to help patients live better lives. I believe the ManagiDiTH program is perfect for me because it focuses on digital technology, healthcare, and management. I am excited about the practical side of this program and its focus on solving real-world healthcare problems.

I believe my education and skills make me a good candidate for this program. I am very motivated to learn and work with others to improve healthcare through technology.

Thank you for considering my application. I look forward to the chance to grow and contribute to the ManagiDiTH community.

Sincerely,

Leonor Silva Santana
