

Dear Admissions Committee,

I am writing to express my deep interest in joining the MSc program “Management of Digital Innovation in the Health Sector (managiDiTh)”. As a physiotherapy graduate from the International Hellenic University and a current postgraduate student in the MSc program “Biomedical Engineering” at the Aristotle University of Thessaloniki (AUTH), I am seeking to further expand my academic and professional horizons by developing strong skills in healthcare management, digital innovation, and strategic leadership. I consider this program a unique opportunity to bring together my clinical knowledge, research experience, and growing expertise in biomedical technologies with advanced training in health policy and business strategy.

My studies initially focused on physiotherapy, where I developed a strong foundation in patient-centered care and evidence-based practice. During my undergraduate studies, I completed four clinical semesters and a four-month internship in a rehabilitation center, which gave me hands-on experience in real-time rehabilitation and collaboration with multidisciplinary teams. These early experiences not only shaped my commitment to improving health outcomes but also highlighted the need for systemic improvements in healthcare organization and resource management.

Driven by a desire to contribute beyond the clinical setting, I enrolled in the MSc in Biomedical Engineering at AUTH. This interdisciplinary program has equipped me with essential skills in scientific research, medical affairs and needs , and biomedical data analysis, while providing me with a better understanding of how technological advancements can transform healthcare delivery.

Looking ahead, I aspire to pursue a career in healthcare management and policy-making, with a particular interest in integrating digital health tools and systems to improve service efficiency and patient outcomes. I am especially drawn to managiDiTh’s emphasis on digital innovation, strategic management, and entrepreneurship within the healthcare sector. I am confident that the program’s multidisciplinary approach and international academic environment will offer the knowledge and practical skills necessary to support my transition into leadership roles in healthcare institutions, public health agencies, or health-focused startups.

On a personal level, I have always been motivated by the challenges faced by healthcare systems in balancing quality, accessibility, and sustainability. Growing up in Greece, I witnessed the pressures placed on public healthcare services and the urgent need for modernization and reform. These experiences have fueled my

interest in health policy and digital transformation as critical pathways to equitable and efficient healthcare.

My will to learn and evolve combined with my collaborative mindset, interdisciplinary perspective, and strong communication and organizational skills support my ability to contribute meaningfully to the academic environment of the managiDiTH program.

Thank you for considering my application. I look forward to engaging with and gaining valuable insights from the rich academic and professional community of the managiDiTH program.

Sincerely,

Tselempi Evangelia
