

Dear members of the Committee,

I am writing to express my interest in the Master's Program in Digital Transformation in Healthcare. With a background in Midwifery and passion for the digital technologies into healthcare systems, I believe this program suits perfectly with both my academic career and my desire for future professional growth.

Throughout my underground studies in Midwife and my present studies in Master's with the title "Prenatal care- Childbirth and Contraception" (I only have to present my final paperwork and complete the course), I became aware of the potential for digital tools to reshape the healthcare experience, not only for patients but also for providers. Both maternal and women's health could benefit from innovative solutions, including better data management, remote monitoring, more personalized care and better communication between professionals and patients. Although I have not yet worked professionally in the field, my academic journey has forced me to desire to contribute to it in a meaningful way. What draws me to this program is its forward-looking perspective. I am interested in exploring how digital health technologies, such as electronic pregnancy records, telemedicine, mobile health applications, etc., can be used ethically to enhance outcomes in maternal health.

I see this program as the ideal next step for me to develop the skills needed to work in healthcare and innovation. I believe that by combining my knowledge in Midwife with the expertise I will gain through this Master's, I can contribute to providing healthcare systems that are smarter, more accessible and more responsive to patients' needs.

Thank you for considering my application. I would be honored to be part of this program and look forward to the opportunity to grow both academically and personally within such a dynamic field.

Sincerely,

Konstantinidou Anna.
